

Wood, Metal, and Glass Special Effects

WOOD DECORATIVE FINISHES:

- **Burl:**

Is a special polyurethane varnish obtained by a unique method of application of selected stain and a choice of contrast intermediate colour.

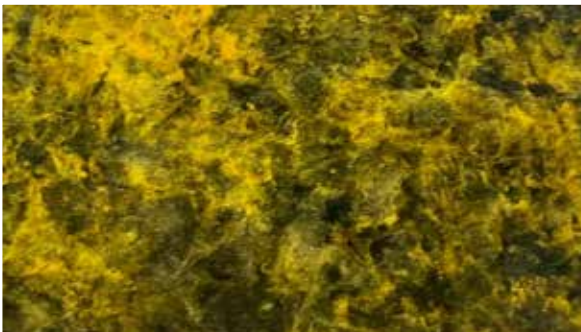

- **Mother Pearl Hammer Type:**

Is a two component polyurethane material based on acrylic resin and selected pearlescent pigment with the addition of special additives that gives a hammer – like finish suitable to perform an attractive looking effect.

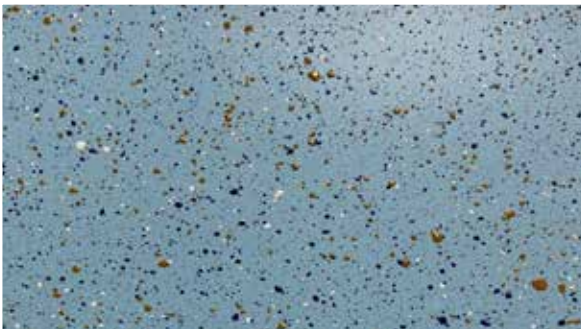

- **Orange Peel:**

Is a two-component product based on saturated poly-functional polyester resin, selected fillers and pigments. It is formulated to produce a refined decorative finish with a lightly embossed aesthetic peel.

- **Metallic Marble:**

Is a special polyurethane varnish based on poly – functional saturated polyesters and selected metallic pigments.

- **Ceramic:**

A polyurethane material based on poly – functional saturated polyester, selected pigments that gives an anti – abrasive spots.

- **Metallic Finish:**

Is a special polyurethane varnish based on poly – functional saturated polyesters and selected metallic pigments.

- **Marble Effect:**

Is a combination of polyurethane based on poly – functional saturated polyesters & dyes. It is designed to give the surface a marble – like finish, granite and varieties of marbles.

- **Leather Effect:**

Is based on a stained nitrocellulose lacquer with selected pigments. It is designed to provide a natural effect of brown or any kind of leather. The effect may vary from small to big crack depending on the density of the applied material.

- **Embossed Finish:**

Is a mono component product based on selected resins, fillers and pigments.

- **N.C. Crackled Effect:**

Is a solution based on nitrocellulose, modified alkyd resins selected fillers. It is developed to give a dramatic cracking effect onto the surface and it displays a very unique and antique design.
